

Red Hat - Linux

EX297: Red Hat Certificate of Expertise in Persistence Exam

Testing the skills required for using Java Persistence API (JPA) with JBoss Hibernate

\$400.00

Upcoming Dates

Course Description

The Red Hat Certificate of Expertise in Persistence Exam tests whether candidates are ready for the real-world responsibilities of creating and maintaining Java™ applications that use the Java Persistence API (JPA) with JBoss® Hibernate®.

The Red Hat® Certificate of Expertise in Persistence Exam credential demonstrates an individual's readiness for the real-world tasks associated with using the Java™ Persistence API (JPA) with JBoss Hibernate. The JPA is a Java programming language framework for managing relational data, and Hibernate is a high-performance object-relational persistence and query service that implements the JPA.

Course Outline

Audience

The Red Hat Certificate of Expertise in Persistence is designed for:

- Experienced Java application developers and architects.
- Business component and database developers.

Prerequisites

JBoss Hibernate Technology (JB297) course or equivalent experience

What You Will Learn
